

CHAPTER V

CONCLUSIONS AND SUGGESTIONS

5.1 Conclusion

Based on the results of data analysis, the author concluded that the types of code mixing using Kupang Malay into Indonesian were inner code mixing, and the types of code mixing using English into Indonesian were outer code mixing. The forms of code mixing found in this video were insertion of words, phrases, and reduplication. The types of inner code mixing found were 15 data, outer code mixing 18 data, while forms of code mixing found namely, insertion of word were 20 data, insertion of phrase 10 data, and there was only one data of reduplication. In addition to the findings above, there were other findings outside of author's research namely, in this video there were inner code mixing from Kupang Malay into Jakarta and vice versa, there were outer code mixing from English into Kupang Malay and Jakarta. The two speakers often paused in conversation and switched languages and dialects. The speakers often switched roles when imitating the way someone spoke or when giving an example to the interlocutor, so in this video there were more cases of code switching than code mixing.

5.2 Suggestions

For next researchers who are interested in researching cases of code mixing in videos, should be more thorough and not only focus on video transcripts in the form of writing but also on the verbal communication of the speakers in the video, because the speakers may not only do code mixing but also do code switching.
